DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

- 2. Claim 2 is objected to because of the following informalities:
 - in claim 2, ll 5, "the" should be changed to "a."

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 4. Claim 5 is rejected under 35 U.S.C. 102(a) as being anticipated by the admitted prior art (Description of the Related Art section in the specification and Fig. 22).

Regarding claim 5, as shown in Fig. 22, the admitted prior art teaches a communication control device (SLT 500) communication with a terminal side ONU side) comprising:

Art Unit: 2663

A table forming information sending unit creating a table forming information and sending the table forming information to a communication terminal device (one of ONUs, e.g. 400-1) (since the SLT 500 allocates the bands to the ONUs 400-1 through 400-n, page 2, ll 18-19, and the table forming information is not defined, therefore, the table forming information reads on the bandwidth allocation information sent from the SLT to the ONUs and the table forming information sending unit must be included in the SLT in order to create the bandwidth allocation information and send it to the ONUs).

A control-side notice information management memory receiving and managing a notice information sent by the communication terminal device (since the SLT receives and recognizes the buffer notice from the ONUs, and allocates the bands to the ONUs, page 2, ll 7-19, therefore, the control-side notice information management memory must be included in the SLT in order to perform the claimed receiving and managing functions on the received buffer status notice).

A buffer status recognizing unit recognizing a buffer status of the communication terminal device (one of ONUs, e.g. 400-1) from a content of the control-side notice information management memory (since the SLT receives and recognizes the buffer notice from the ONUs, and allocates the bands to the ONUs, page 2, ll 7-19, therefore, the buffer status recognizing unit must be included in the SLT in order to perform the claimed recognizing function on the received buffer status notice).

Allowable Subject Matter

5. Claims 1-4 are allowed. The prior art alone or in combination fail to teach or make obvious on a notice information setting unit for comparing a size relation between status

Art Unit: 2663

information about past buffer status values for the buffer and a current buffer status value acquired, and setting notice information on a bit basis as determined the size relation when considered in combination with other limitations in the independent claims 1 and 4.

Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- Yuki et al. (USPN 6,778,557 B1), disclosing a point-to-multipoint system (Fig. 1) comprising a terminal device having buffers (Fig. 2), a control device requesting buffer status reports from the terminal device (Fig. 3).
- Hoebeke (USPN 6,424,656 B1), disclosing storage queue and queue status within an ONU.
- Rusu et al. (USPN 5,938,749), disclosing queue measurement apparatus that keeps track of previous and current queue lengths.
 - Ghaibeh et al. (USPN 5,926,478), disclosing a point-to-multipoint optical network.
- Shimada et al. (USPN 6,791,984 B2), disclosing a dynamic band allocating SLT apparatus.
- Any inquiry concerning this communication or earlier communications from the 7. examiner should be directed to Nittaya Juntima whose telephone number is 571-272-3120. The examiner can normally be reached on Monday through Friday, 8:00 A.M - 5:00 P.M.

Art Unit: 2663

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ricky Ngo can be reached on 571-272-3139. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
